The positive catalysts:

- # Signs of pick-up in economic activity are visible amidst waning of the second wave of the pandemic and lockdown restrictions being eased. Also, with normal monsoon on cards, agriculture sector is likely to remain buoyant and most importantly, the economy is likely to witness robust rebound on backdrop of fiscal stimulus packages by central banks across globe. The vaccination efforts gathering momentum also acts as positive catalyst.
- # Despite challenging times with second wave of Covid and local lockdown affecting operations at many locations the firm posted robust Q1FY22 and was largely attributed to healthy execution.
- # Q1FY22 revenue grew 38.0% YoY and net-profit grew nearly four-fold to Rs 1,174 crores on backdrop of solid order book coupled with large project executions and robust E&C growth amidst pandemic.
- # International orders were 20% of the total order book of Rs 323721 crore as on June 30, 2021. Order inflow at Rs. 266bn (+13% YoY), bagged orders worth Rs. 26,557cr in Q1FY22.

- # The sustained high oil prices are expected to boost the investment momentum in GCC nations.
- # High liquidity, improved leverage, prospective pipeline with better utilization and production is expected to continue in the near-term.

Technically, brace yourselves for a major breakout play from a classic 'Flag pattern' breakout on the weekly charts. An impulse uptrend is seen forming on the daily time scale, with positive SAR series, with recent sequence of higher high/low intact on all time frames.

Add to that a bullish divergence and a rising stochastic signal (on weekly charts) with recent increase in volumes signaling a larger rebound. The 200 days Exponential Moving Average (EMA) of the stock on the daily chart is currently at 1383 zone. The level of Rs 1383-1421 zone will act as a strong support zone and any corrective declines to these levels should be used as an opportunity to initiate aggressive long positions.

A potential entrance exists at CMP, and on dips between 1500-1550 zone, targeting psychological 1750 mark and then aggressive targets at 1900 mark. Stops below 1357. Holding Period: 3-5 Months.
